WHAT IS MOST VALUABLE?

Other than URL testing, there are no pieces of this software that are actually useful to us.

HOW HAS IT HELPED MY ORGANIZATION?

We were planning to load test this product for a significant release. It was somewhat helpful.

WHAT NEEDS IMPROVEMENT?

There are only certain features that actually work. Their URL testing and JMeter tests work only if testing URLs. If testing anything else, like WebDriver tests using JMeter and BlazeMeter, they do not work.

FOR HOW LONG HAVE I USED THE SOLUTION?

We have used it for close to two years but we are planning to NOT extend our licensing.

WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?

We had stability problems several times and we lost all our credits.

WHAT DO I THINK ABOUT THE SCALABILITY OF THE SOLUTION?

We did have scalability problems.

HOW ARE CUSTOMER SERVICE AND TECHNICAL SUPPORT?

Technical support was OK for some situations.

WHICH SOLUTION DID I USE PREVIOUSLY AND WHY DID I SWITCH?

We did not use a previous solution.

HOW WAS THE INITIAL SETUP?

Setup was straightforward and simple.

WHAT'S MY EXPERIENCE WITH PRICING, SETUP COST, AND LICENSING?

I feel it's overpriced unless they fix several things on their end.

WHICH OTHER SOLUTIONS DID I EVALUATE?

We did evaluate other options, but we chose this one because setup was easy.

WHAT OTHER ADVICE DO I HAVE?

Look for your needs. This product is not a complete load-testing solution. It does offer certain types of load testing like URL testing but, other than that, we did not find them useful.
