WHAT IS MOST VALUABLE?

The so-called full packets, so you can develop software and systems using these packets, and implement software on the mainframe side and the client side. You can use the same packets, so it's very powerful.

WHAT NEEDS IMPROVEMENT?

Nowadays, it's internet and websites, it's very common. I think they have to make this product more and more flexible to use it in the web as well. I think that's very important for the future.

FOR HOW LONG HAVE I USED THE SOLUTION?

More than five years.

WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?

It's definitely stable.

HOW IS CUSTOMER SERVICE AND TECHNICAL SUPPORT?

My opinion is that it is excellent.

HOW WAS THE INITIAL SETUP?

I'm not sure of the latest ones, but in past years it has been very, very clear and complete, not complex at all.

WHAT OTHER ADVICE DO I HAVE?

I rate it eight out of 10. It's just very powerful tool, very powerful product to use. Nowadays, there are a couple of mainframe companies, using mainframe products, so to be honest, I'm not recommending it. Of course, if you have mainframe and you have do something in the mainframe that's different.
