**Calvin Piggott**

### **WHAT IS OUR PRIMARY USE CASE?**

My primary use of this solution is to supplement my existing antivirus and enable/enhance my anti-ransomware capabilities.

### **WHAT IS MOST VALUABLE?**

Its ability to rollback anti-ransomware once an attack has started is the most valuable feature.

### **WHAT NEEDS IMPROVEMENT?**

It needs to include built-in deployment. This will make the job easier rather than having to go and dig up an Active Directory deployment along with policy objects.

### **WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?**

It's very stable. It is a production-grade solution.

### **WHAT DO I THINK ABOUT THE SCALABILITY OF THE SOLUTION?**

It scales well. However, it lacks deployment functionality because other vendors, like Symantec and McAfee, are building that into their tools.

### **HOW ARE CUSTOMER SERVICE AND TECHNICAL SUPPORT?**

On a scale from one to ten, I would rate their technical support as a nine.

### **IF YOU PREVIOUSLY USED A DIFFERENT SOLUTION, WHICH ONE DID YOU USE AND WHY DID YOU SWITCH?**

We previously used Symantec Endpoint. Our reason for switching is because Check Point offers the most secure and surefire way to tackle ransomware. I was part of the decision-making process.

### **HOW WAS THE INITIAL SETUP?**

The initial setup was not straightforward. There is content available on the Check Point support site (on the Internet). This enabled us to deploy it out successfully.

### **WHAT ABOUT THE IMPLEMENTATION TEAM?**

We implemented it internally.

### **WHICH OTHER SOLUTIONS DID I EVALUATE?**

We did not consider any other vendors during the evaluation process.

### **WHAT OTHER ADVICE DO I HAVE?**

Don't think about getting the product. Just do it. I would rate it a ten out of ten. No other product on the market is able to rollback a ransomware attack once it has started.
