**David Roy**

### **WHAT IS OUR PRIMARY USE CASE?**

Perimeter protection. It has performed well. It's good.

### **HOW HAS IT HELPED MY ORGANIZATION?**

It hasn't really improved the way our organization functions. It has just provided that extra functionality. That is something we now demand of all firewalls.

### **WHAT IS MOST VALUABLE?**

The ability to include logs for everything that you do for admin. Also, it has web filtering built in and VPN. Those are the main features we use.

### **WHAT NEEDS IMPROVEMENT?**

I would like the ability to have an overview, cross-site: One portal that does all firewalls.

### **FOR HOW LONG HAVE I USED THE SOLUTION?**

One to three years.

### **WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?**

The stability is good, but that's because we've got a high-availability configuration.

### **WHAT DO I THINK ABOUT THE SCALABILITY OF THE SOLUTION?**

It is scalable, but, as I said before, you are not able to connect across multiple sites for a similar firewall.

### **HOW IS CUSTOMER SERVICE AND TECHNICAL SUPPORT?**

I would say tech support is about a six out of 10.

### **WHICH SOLUTIONS DID WE USE PREVIOUSLY?**

There was no previous solution. I inherited this one. When selecting a vendor, the most important criteria are history, reputation, and looking at the industry ratings.

### **HOW WAS THE INITIAL SETUP?**

Although I wasn't involved in the initial setup, I believe it was quite complicated.

### **WHAT OTHER ADVICE DO I HAVE?**

Do the homework because Check Point is rather expensive. There are better firewalls on the market now that are cheaper and provide better functionality and security. I rate it a six out of 10 because the user interface is overly complicated.
