Robert Duvall

WHAT IS OUR PRIMARY USE CASE?

We implement this in the hospitality industry and need to control internal secure LAN/Wi-Fi users and offer external Wi-Fi to our customers while keeping the system secure. This product allows us to do that.

HOW HAS IT HELPED MY ORGANIZATION?

Cisco Meraki is easy to use, and the mesh is flawless over 37 locations. We can order and have a direct shipped product without ever having to program it onsite. Just inject it into the template, and all is cookie stamped.

WHAT IS MOST VALUABLE?

Advanced security category blocking is a great way to secure what people are doing and seeing to prevent malware from getting into the network.

WHAT NEEDS IMPROVEMENT?

A mobile app would be great to see if the system is up, and some minor tools, but not to add or remove rules. Improvement here would be appreciated.

FOR HOW LONG HAVE I USED THE SOLUTION?

More than five years.
