### WHAT IS MOST VALUABLE?

There are two features that are very good. One is that it doesn't use a lot of bandwidth. The other is that you can recover all the way up to a certain particular moment.

### WHAT NEEDS IMPROVEMENT?

The solution normally supports only specific types and amounts of storage. If it could be increased to support much larger amounts or a wider range, it could fetch a bigger market. If the solution could work with other storage solutions, it would be better. I would like them to add automation features across the solution.

### FOR HOW LONG HAVE I USED THE SOLUTION?

I've been using the solution for more than five years.

### WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?

The solution is very stable. Once it's installed, many customers forget they even have it.

### WHAT DO I THINK ABOUT THE SCALABILITY OF THE SOLUTION?

The solution is very scalable. As long as you have room for the storage, it can scale up to meet it.

### HOW WAS THE INITIAL SETUP?

The solution is very simple to implement. Even a customer could do it. You don't have to be too technical.

### WHAT'S MY EXPERIENCE WITH PRICING, SETUP COST, AND LICENSING?

The solution isn't too expensive. There are no other fees above licensing. Once you buy the license, because the license is attached to the storage that you are replicating, it's a one-off price.

### WHAT OTHER ADVICE DO I HAVE?

I would recommend the product. It's good, especially for those who want to do replication and don't have a lot of money. It's a very good product and it uses very little bandwidth. I would rate the solution eight out of ten.
