**Sungmin Chun**

### **WHAT IS OUR PRIMARY USE CASE?**

External and internal web application vulnerability scan.

### **HOW HAS IT HELPED MY ORGANIZATION?**

We were able to easily diagnose a large number of web applications automatically. The depth was low, but the part that the user could miss was also diagnosed.

### **WHAT IS MOST VALUABLE?**

AppScan seems to be very good at detecting reflected XSS vulnerabilities. This increases the security of web applications that are in operation.

### **WHAT NEEDS IMPROVEMENT?**

It would be nice to be able to specify the parameter values used in the login sequence function.
