Windows Server Support at Nationwide

**it\_user251865**

### **VALUABLE FEATURES**

Their reliability and their integration. I've been working with HP solutions since the 90s, and they're great.

### **IMPROVEMENTS TO MY ORGANIZATION**

They do what they're supposed to do. They're very flexible.

### **ROOM FOR IMPROVEMENT**

In the future, I'd like to see more manageability. They keep adding features which are nice, so I can't think of anything else.

### **STABILITY ISSUES**

Relatively stable and reliable for the amount that we have. I've been working with HP hardware for decades, and as with all hardware there's always problems, but for the years that I've been working with them they're always been very reliable.

### **SCALABILITY ISSUES**

We haven't really had to scale, but we can provision them usually from the get-go for what we do.

### **CUSTOMER SERVICE AND TECHNICAL SUPPORT**

It's okay. Working in support myself, their response times for us (we have a couple thousand servers) didn't seem to be great. A lot of the time, there's no concessions for response times not being met.

### **PREVIOUS SOLUTIONS**

They've had servers forever, and we've always had HP. So we just continued using the existing solution.

## HPE BladeSystem

### **INITIAL SETUP**

They're pretty straightforward. It's all automated so that their tools are deployed for us.

### **OTHER SOLUTIONS CONSIDERED**

We've been with HP forever, so I don't think so.

### **OTHER ADVICE**

I'm pretty opinionated, but first look at pricing and see which option is right for you. HP is a good bet, but it really depends. I can only speak about HP, but they've been very good.
