Data Scientist at a tech services company  
with 1,001-5,000 employees

**Prithviraj Dutta**

### **WHAT IS OUR PRIMARY USE CASE?**

We have used KNIME for text processing, specifically for leveraging the text processing features for entity extraction, document classification, relationship extraction, and other such NLP tasks.

### **HOW HAS IT HELPED MY ORGANIZATION?**

We are far from reaping the benefits of this platform as an organization. However, so far, we have been able to appreciate the considerable reduction in prototyping time.

### **WHAT IS MOST VALUABLE?**

The most useful features are the readily available extensions that speed up the work. For instance, KNIME offers multiple document taggers, which one can use with relative ease. Similarly, the number of predefined NER taggers are also very handy.

### **WHAT NEEDS IMPROVEMENT?**

The documentation needs a proper rework.

### **FOR HOW LONG HAVE I USED THE SOLUTION?**

Less than one year.
