Suk Kim

senior managed consultant at a tech services company

### WHAT IS MOST VALUABLE?

ZFS: It is very stable and scalable. It provides excellent security, and cool deduplication, compression, encryption and recovery capabilities. DTrace: It is the best for performance analysis and fault analysis. Zone containers: The feature is stable and can provide the service with fewer resources.

### HOW HAS IT HELPED MY ORGANIZATION?

Improved transaction processing performance Fewer faults (reduction in maintenance fees)

### WHAT NEEDS IMPROVEMENT?

GUI or menu configuration support Management tool visualization

### FOR HOW LONG HAVE I USED THE SOLUTION?

I have more than 15 years of experience with Solaris, including three years of experience with Solaris version 11.

### WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?

I have never encountered any stability issues; stability is perfect.

### WHAT DO I THINK ABOUT THE SCALABILITY OF THE SOLUTION?

I have not encountered any scalability issues. Scalability is powerful and very simple.

### HOW ARE CUSTOMER SERVICE AND TECHNICAL SUPPORT?

I rate technical support in Korea very high.

**WHICH SOLUTION DID I USE PREVIOUSLY AND WHY DID I SWITCH?**

We used Linux on x86. Linux is very good, but this project is very important from the security, stability and scalability points of view.

**HOW WAS THE INITIAL SETUP?**

Initial setup is very simple and clean.

**WHICH OTHER SOLUTIONS DID I EVALUATE?**

We evaluated Linux. The issue was cost.

**WHAT OTHER ADVICE DO I HAVE?**

The Solaris Unix platform is very powerful, simple, and scalable. The on-premise environment is optimized, but the cloud environment is not. If you need a Unix platform, I recommend Oracle Cloud. Oracle Cloud only supports Unix platforms.
