VALUABLE FEATURES

I am in the process of suggesting a new BI tool to our management team and I am looking at the different BI tools available. Certainly Necto is good when it comes to: Infographics Multiple database connections Security It has nice social features which can give context based discussions, search for users and relevant content within the system. Necto has a Twitter-like feeling since we can subscribe to users in Necto. Subscribing to one of our colleagues lets us follow all the changes made to his or her workboard.

ROOM FOR IMPROVEMENT

I am disappointed at following points Lack of BigData talks Predictive analytics looks a bit immature Nowadays everybody is moving towards BigData and in this scenario, if any tool falls short in this area then it is a red signal for all of us.

USE OF SOLUTION

Less than 1 year

DEPLOYMENT ISSUES

No

STABILITY ISSUES

No

SCALABILITY ISSUES

Yes. In my opinion, Necto isn't scalable for a large amount of data. It cannot handle BigData.

CUSTOMER SERVICE AND TECHNICAL SUPPORT

Customer Service: We have not used customer service so far. Technical Support: We have not used technical support so far.

PREVIOUS SOLUTIONS

I am into the process of suggesting a new BI tool to our management team wherein I am looking at the different BI tools available on the market. We have not used any BI tool so far and we may explore OBIEE next.

INITIAL SETUP

It was smooth

IMPLEMENTATION TEAM

It was a trial version to check the feasibility.

ROI

Necto has not been implemented yet. We ran a POC to check the features and capabilities and hence there is no **ROI** so far.

PRICING, SETUP COST AND LICENSING

Necto has not been implemented so far. We ran a POC to check the features and capabilities and hence there is no cost involved.

OTHER ADVICE

I would like to make one comment to the user community - if you are looking for powerful tool which can support large scale databases and BigData Analytics, Necto is NOT an option. Please refrain from using it.
