VALUABLE FEATURES

Turn-key access to any browser/OS combination I need Video recording with permalink to the test job

IMPROVEMENTS TO MY ORGANIZATION

I've been able to help numerous companies get up and running with Selenium quickly thanks to Sauce Labs.

USE OF SOLUTION

4 years

CUSTOMER SERVICE AND TECHNICAL SUPPORT

Customer Service: Support is friendly and responsive. Technical Support: Solid.

PREVIOUS SOLUTIONS

Local execution and a small number of virtual images. Switched because it became too onerous to support.

INITIAL SETUP

For a technical person, it's pretty straightforward. It can be complex given the nature of Selenium and integrating with a third-party platform. But once you understand the fundamentals of Selenium and Sauce, it's simple enough to connect your tests to their infrastructure and capture the results for your own reporting needs.

IMPLEMENTATION TEAM

I help companies implement Selenium. When implementing Sauce (which is a given unless there are constraints that prohibit it) I either update their existing test code to work with it, or implement my open source Selenium framework for their testing needs (<http://github.com/chemistrykit/chemistrykit>) which comes with Sauce support built-in.
