VALUABLE FEATURES:

For more than a year, I've been working on automation of functional testing, regression testing using TestComplete. It is a great tool and hard to learn and use. Pros: - It is similar to other tools like Selenium IDE you can record and play test scripts

- Developer needed to create test scripts using VB Script, Jscript, Delphiscrypt etc - - QA perspective, helps test results logs helps in finding precisely the issue where test failed - Tests can be recorded in keyword driven or screen capture modes on some screens. - Tests can be created for regression, functional, DDT (data driven testing), ODT(object driven testing), and so on and it is good to use it for Cross browser testing. Cons: - There is no support for mobile testing automation.

- QA need to depend upon developer to correct the scripts any change happens. Automated

IMPROVEMENTS TO MY ORGANIZATION:

Recording the scripts and running the scripts should be available to all users.

As a QA, I would like to use it by myself using the application recording and replaying the tests.

SmartBear TestComplete

ROOM FOR IMPROVEMENT:

On some of the UI application pop up screens, Closing and opening screens etc.
