Aishwarya

WHAT IS OUR PRIMARY USE CASE?

An automation tool not only always has the purpose of redefining the APIs after their functional or performance testing, but also provides an easier execution platform for the APIs so that they can be easily consumed by the future developers who are yet to work on them.

HOW HAS IT HELPED MY ORGANIZATION?

It did help us to achieve timely testing of our APIs and the right reasons to enhance their functionality or performance.

WHAT IS MOST VALUABLE?

I've majorly worked on SoapUI Pro, LoadUI and Service Pro and found all of them equally useful and very easy to understand tools.

WHAT NEEDS IMPROVEMENT?

The tools that are stated by SmartBear speaks for itself, but when it comes to improvements, there could be a release which only aims for the development of beginners in terms of understanding the tools that are laid by SmartBear.

FOR HOW LONG HAVE I USED THE SOLUTION?

Three to five years.
