IMPROVEMENTS TO MY ORGANIZATION

Usually, the Web/SSL based certificate expires for our UCS servers and we were unable to monitor them on timely manner. This feature from Solarwinds SAM helped us to monitor and alert whenever the SSL cert is going to expire on the server to avoid any downtime of the services running on the server specially on ADFS platform where we have Video conference, Webex, Office 365 and single sign-on services.

VALUABLE FEATURES

SSL Certificate Monitoring and Expiry Alerting

ROOM FOR IMPROVEMENT

As per my view, Solarwinds should come up the same monitoring system for other certificate expiration alert apart from SSL. Currently, it can be achieve through script writing but that is tedious and tough task to do due to scarcity of script writer experts.

STABILITY ISSUES

None

SCALABILITY ISSUES

None

CUSTOMER SERVICE AND TECHNICAL SUPPORT

Customer Service:

Very good. Technical Support:

Very good.
