WHAT IS MOST VALUABLE?

The insight into details such as latency at the VM level (disk, host, and network) is unmatched. At a quick glance you can significantly cut down troubleshooting time and quickly identify bottlenecks.

HOW HAS IT HELPED MY ORGANIZATION?

Almost no time is spent on maintaining storage. Since LUNs are no longer part of the storage infrastructure, there is no need to worry about performance, LUNs filling up, or optimizing snapshots.

WHAT NEEDS IMPROVEMENT?

None come to mind; the unit was a breeze to setup and I haven't come across any sort of setup issues at all.

WHAT WAS MY EXPERIENCE WITH DEPLOYMENT OF THE SOLUTION?

No.

WHAT DO I THINK ABOUT THE STABILITY OF THE SOLUTION?

No.

WHAT DO I THINK ABOUT THE SCALABILITY OF THE SOLUTION?

No.

HOW ARE CUSTOMER SERVICE AND TECHNICAL SUPPORT?

Customer Service: Excellent. Technical Support: Excellent.

WHICH SOLUTION DID I USE PREVIOUSLY AND WHY DID I SWITCH?

We were using a NetApp, however its performance was severely lacking and we required a larger storage footprint.

HOW WAS THE INITIAL SETUP?

Extremely simple - you are prompted for a management IP to get things going, and then via a web GUI you can add your vCenter hosts. After you add the datastores to your hosts, you are done - not partitioning, no RAID groups, etc.

WHAT ABOUT THE IMPLEMENTATION TEAM?

Implemented in-house.

WHICH OTHER SOLUTIONS DID I EVALUATE?

We were considering options from NetApp, Dell, HP, and Nutanix.

WHAT OTHER ADVICE DO I HAVE?

The compression / deduplication numbers they advertise are probably accurate for a pure-VDI environment. In a mixed-workload environment, your numbers will definitely vary.
