VALUABLE FEATURES

What I like most is the end to end view which is quite important for supporting the design teams.

IMPROVEMENTS TO MY ORGANIZATION

In the design team, everything is based on things that already exists and Tufin helps us make changes safely.

ROOM FOR IMPROVEMENT

I'd like to say SDN needs to be improved. This is the key and where the revolution in technology is going. This is something you need to be aware of as the legacy devices are not compatible with the SDN devices.

STABILITY ISSUES

As far as I know, it's OK.

SCALABILITY ISSUES

It's been able to scale for our needs. What we have is OK.

CUSTOMER SERVICE AND TECHNICAL SUPPORT

Great. I'm not in a direct relationship with them, so it's indirect but it's OK I think.

OTHER SOLUTIONS CONSIDERED

We didn't look at any other solutions.

OTHER ADVICE

I think we're not using it for all the devices we intend to use it for, but somewhere in the middle. It works, it's as simple as that because we noticed the difference after we got it working, and we immediately saw the advantages of having it.
