## Review by a Real User

Verified by IT Central Station

BI and Reporting Platform Teams and Tech leader at a software R&D company with 1,001-5,000 employees

**it\_user467523**

### VALUABLE FEATURES

MPP Analytical functions HDFS Copy Resource management

### IMPROVEMENTS TO MY ORGANIZATION

It's enabled us to develop our new reporting system which is used as a SaaS by hundreds of users. We can also load massive amounts of data in seconds and query it with SLA for online dashboards.

### ROOM FOR IMPROVEMENT

Active-Active clusters with online replication. Greater query concurrency. Better documentation/white papers as there are lots of undocumented issues.

### USE OF SOLUTION

I've used it for three to four years.

### SCALABILITY ISSUES

Rebalancing after adding nodes is an issue in terms of resources and especially locking of tables. It would be nice if this could be more transparent.

### CUSTOMER SERVICE AND TECHNICAL SUPPORT

8/10

### OTHER ADVICE

If your product has lots of concurrent queries this solution is not suitable for you, or you need to implement a cache layer.
