### **VALUABLE FEATURES**

Redundancy Speed Security

### **IMPROVEMENTS TO MY ORGANIZATION**

I had 300 physical servers, but now I need only six. It's less noisy, much cheaper, and has less of a tendency to get hot.

### **ROOM FOR IMPROVEMENT**

I want to see a better hypervisor.

### **USE OF SOLUTION**

I've used it for five years, since.

### **DEPLOYMENT ISSUES**

Deployment requires a special proficiency.

### **STABILITY ISSUES**

The product has good stability.

### **SCALABILITY ISSUES**

The stability is perfect, as long as you can afford it.

### **CUSTOMER SERVICE AND TECHNICAL SUPPORT**

Customer Service: We work with a company that provides this service. Technical Support: We work with a company that provides this service.

### **INITIAL SETUP**

It was complex as we have many sites. Therefore, we needed to decide if we should put them all together in a single data center, or to use one instance of vSphere for all our data centers.

### **ROI**

It's the best product on the market. I have never had anything that saved me more money than vSphere. I had 300 servers, each one cost us 15 thousand dollars, but now it's much cheaper. Moreover, thanks to dynamic distribution I am able to maximize the servers' CPU usage.

### **PRICING, SETUP COST AND LICENSING**

It requires one person to manage it on a full-time basis.

### **OTHER SOLUTIONS CONSIDERED**

We tested Hyper-V, and it was awful.

### **OTHER ADVICE**

It costs a lot. You should go to a VMware 6 course.
